I’m a campground owner, and I’ve already registered my campgrounds in the app.
I want to open a lottery for my campgrounds for the upcoming long weekend.

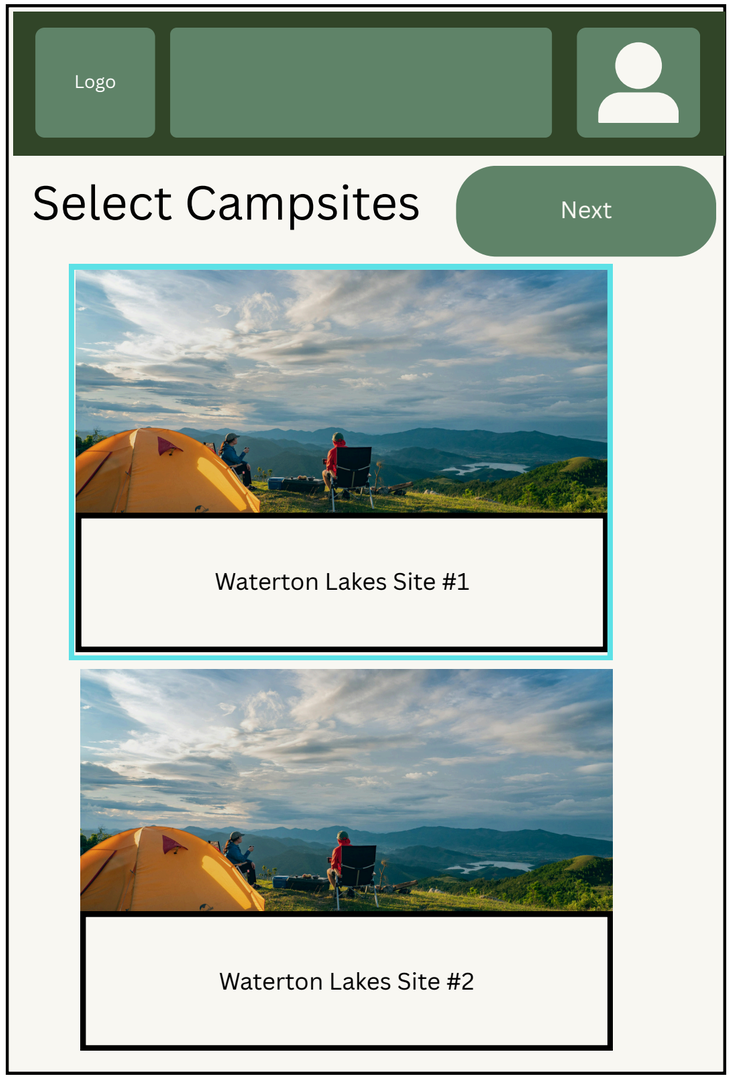

I click on “My Lotteries”

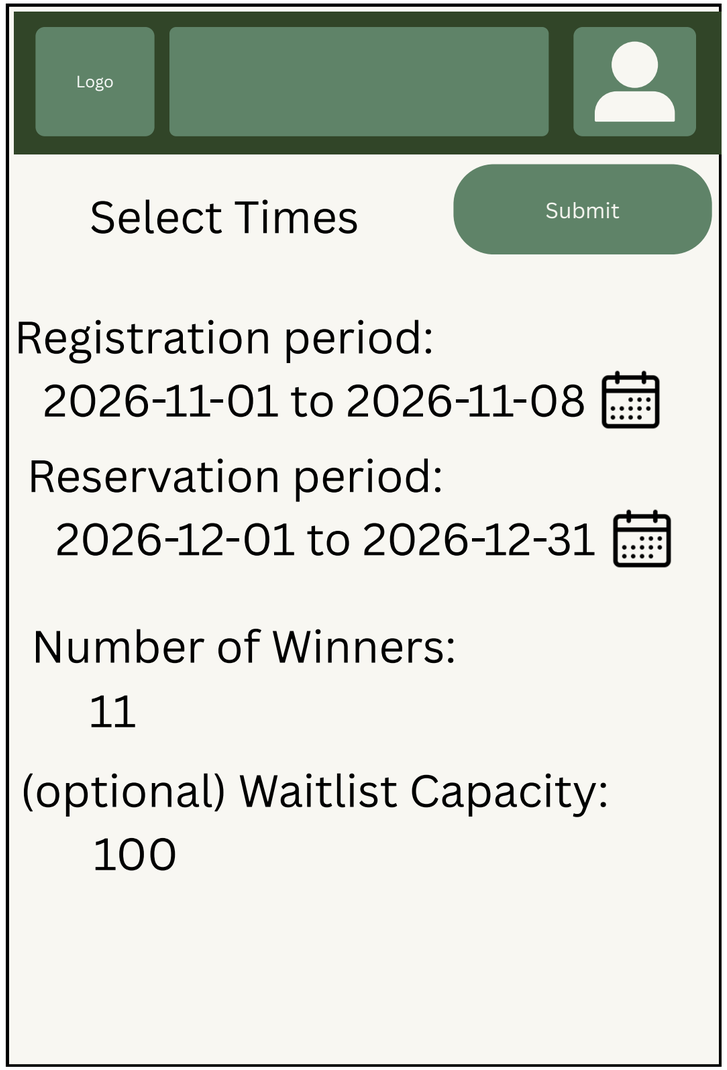

I’m shown a page that lists my active lotteries.
I don’t have any open lotteries, so my only option is “Create New Lottery”.

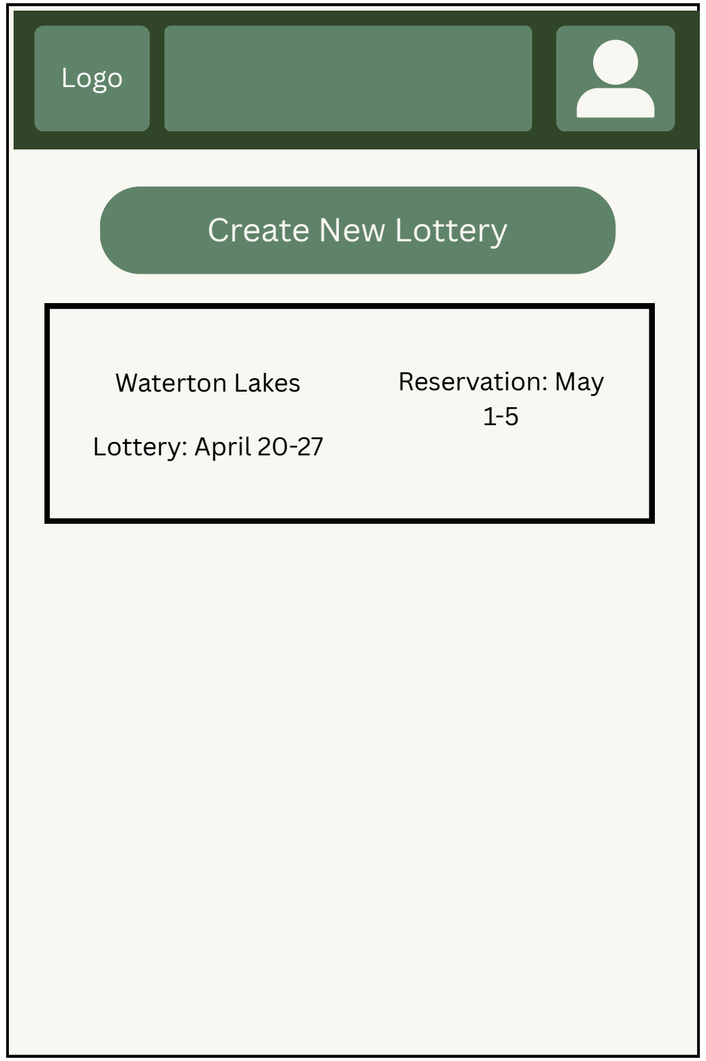

I’m shown a scrollable list of my campsites.
I click to select the campsites I want available in this lottery.
The selected campsites are highlighted to indicate their selection.
I selected the campsites I want, and click ‘Next’.

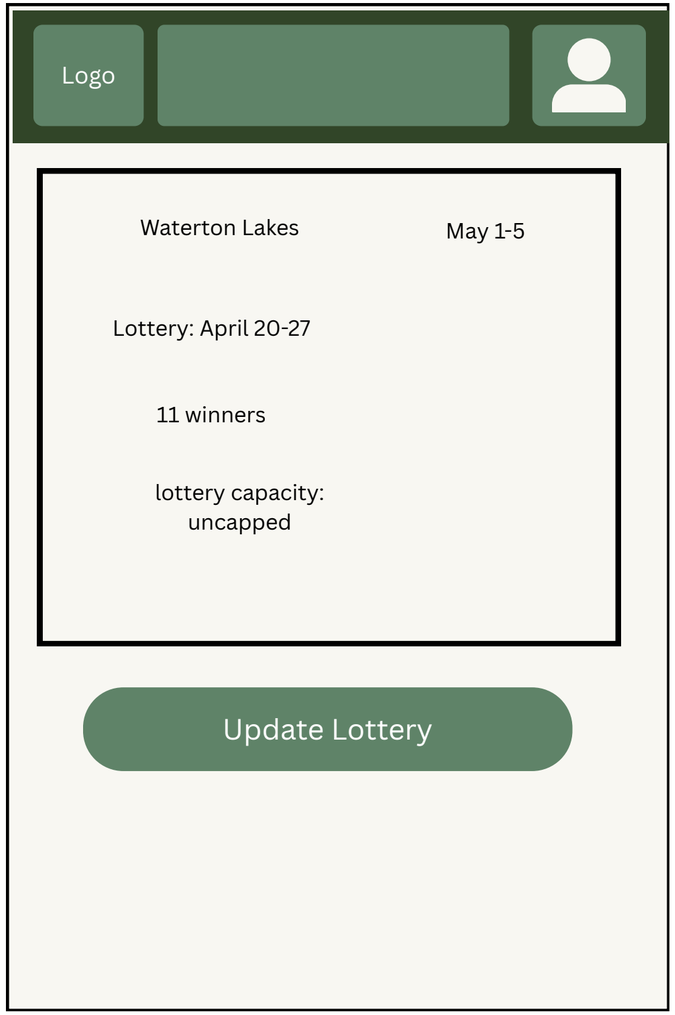

I’m shown the screen to confirm the lottery details.
I set the reservation period to the May long weekend I want to list them for.
I want lottery enrollment to run for a week, so I set the dates for that as well.
I select how many lottery winners I want. This can be more or less than the number of campsites available.
I can set the maximum capacity of the lottery enrollment, by default unlimited.
I’m satisfied with the lottery details so I click ‘Submit’.

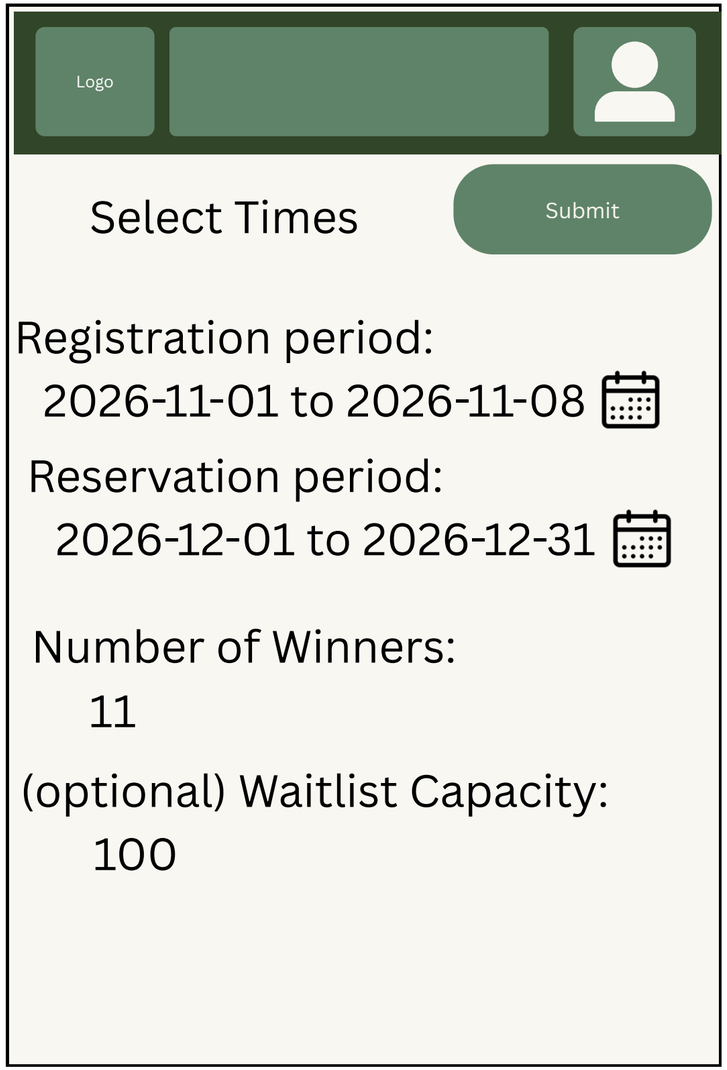

I’m brought back to the lottery homepage where I can see the lottery I just created.
I realize I selected the wrong date for the lottery bookings.
I click on the lottery to view its details.

I‘m shown the details of my lottery. Since I want to change the date, I click ‘Update Lottery’.

I‘m brought to the lottery details page. I change to the date to the correct time and click ‘Submit’ again.

I see that my lottery dates are corrected.
My lottery has been successfully created.
